SUMMARY

Data analyst with experience translating messy, real-world business data into structured, decision-ready metrics using SQL, Python, and statistical analysis. Specialized in defining measurable performance indicators, validating signal quality, and building repeatable analytics pipelines. Experienced in KPI design, A/B-style evaluation, and turning qualitative patterns (customer behavior, operational friction) into quantitative features tied to business outcomes. Actively applying LLM-based extraction logic and experimentation frameworks to evaluate model-derived signals with precision and recall.

EXPERIENCE

Data Analyst (SaaS operations & CRM Analytics) | Flow - Boston, MA | Sept 2025 – Dec 2025

- Owned definition and validation of **12+ operational KPIs** by translating vague business concepts (lead quality, response delay, churn risk) into SQL-driven metric logic, improving reporting consistency by **35%**.
- Designed stratified sampling checks on CRM event data to manually verify classification logic, increasing metric reliability from **82% to 96% precision**.
- Built Python + SQL pipeline linking engagement signals to conversion outcomes, identifying **3 statistically significant drivers** used to prioritize GTM strategy.
- Developed Power BI dashboards adopted by leadership for weekly decisions, reducing ad-hoc analysis turnaround time by **40%**.

GTM Data Analyst (GTM & Customer Analytics) | Voda.ai – Boston, MA | Jun 2025 – August 2025

- Transformed unstructured sales notes and call summaries into structured fields using rule-based NLP logic and feature engineering, enabling downstream revenue modeling.
- Designed cohort analysis comparing message framing strategies, improving outreach response rates by **18%**.
- Created automated SQL validation checks to detect missing or contradictory records, reducing reporting defects by **30%**.
- Partnered with sales and product teams to define measurable concepts like “conversation quality” and “deal friction” using proxy metrics.

Data Science and Market Expansion Analyst (Internship) | Re-Volt Charging – Boston, MA | Jan 2025 – May 2025

- Analyzed **30,000+ location records** to identify high-traffic, high-ROI deployment zones for EV infrastructure.
- Built multi-source datasets combining geospatial, demographic, and operational data to simulate demand outcomes, influencing site selection strategy covering **500+ locations**.
- Applied regression models to predict utilization drivers, improving location ROI forecasts by **22%**.
- Designed reproducible SQL pipelines with reconciliation checks to validate model inputs.
- Supported vendor and site selection decisions resulting in **15% higher projected utilization**.

Business Systems and Reporting Analyst | Aditi Digital Solutions | Andhra Pradesh, India | Feb 2021 – Jul 2023

- Analyzed high-volume transactional and operational datasets using SQL and SAS to support client reporting and compliance workflows.
- Built automated data pipelines for ingestion, transformation, and validation across structured and semi-structured data sources.
- Designed statistical anomaly detection scripts to flag irregular operational patterns, improving exception detection by **35%**.
- Owned end-to-end reporting logic for client-facing operational dashboards used across **multiple business units**, ensuring reconciliation accuracy prior to production release.
- Wrote UAT scripts and validated analytics dashboards prior to deployment for production use.

PROJECTS:

LLM Conversation Signal Validation (Independent Project)

- Built evaluation framework using **precision, recall, and confusion matrices** against manually labeled samples ($n=400$).
- Demonstrated that “objection clarity” metric correlated with churn probability at $r = 0.41$ ($p < 0.05$).
- Used results to simulate A/B-style comparison of prompt definitions and select highest-signal schema.

A/B Testing Simulator for Messaging Strategy

- Designed Python-based experiment framework to evaluate variant messaging impact on engagement.
- Implemented hypothesis testing (t-tests, confidence intervals) to validate lift of **+9.7%** over control.
- Built SQL feature tables for experiment logging and metric attribution.

CRM Data Quality & Feature Engineering Pipeline

- Developed SQL transformation layer converting free-text notes into structured behavioral flags.
- Reduced null-feature rate by **28%** and improved downstream model stability.

Workforce Risk & Capacity Analytics | Tableau | [Interactive Tableau Dashboard](#) | [GitHub Repo](#)

- Analyzed workforce and operational datasets to identify **attrition risk, capacity constraints, and productivity variance** impacting service delivery.
- Built regression-based models to evaluate churn drivers and workload imbalance, supporting **risk-aware staffing and planning decisions**.
- Delivered scenario-based insights used to evaluate operational exposure and support mitigation planning under different demand assumptions.

EDUCATION:

- Worcester Polytechnic Institute (WPI), Worcester, MA (**August 2023 – May 2025**)
Master of Science in Business Analytics, GPA 3.7/4.0
- Gayatri Vidya Parishad (GVP), Andhra Pradesh, India (**June 2017 – June 2021**)
Bachelor of Science in Computer Science, GPA 3.2/4.0

Core Capabilities:

- **LLM & Prompt Metrics:** schema design, hallucination risk control, signal validation
- **Statistical Validation:** precision/recall, hypothesis testing, correlation analysis
- **Experimentation:** A/B design, cohort analysis, metric alignment
- **Data Integration:** multi-source ingestion, feature engineering, structured extraction
- **Process Analytics:** KPI frameworks, business logic translation
- **Tools:** SQL, Python (pandas, scipy), Power BI, Snowflake, Streamlit

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Microsoft Certified: Power BI Data Analyst Associate (In Progress)
- Google Data Analytics Professional Certificate – Coursera
- Excel VBA for Business Automation – Coursera
- Tableau Desktop Specialist – Tableau
- Alteryx Designer Core Certified (In Progress)
